1 Welcome on board

Congratulations on the purchase of your new Saxdor yacht - the best decision ever made!

Saxdor Yachts welcomes you to the new era of boating! Your Saxdor yacht is built to the highest standards for your pleasure with cutting-edge technologies and attention to safety. Enjoy your new boat's amazing design and high functionality coupled with excellent driving.

This manual is your buddy — not something you stow in the furthest corner of your boat. It contains, together with the equipment manufacturers' manuals, essential information you will need to operate your boat in a safe and enjoyable way. It includes detailed information about the boat and its equipment and accessories, as well as instructions for use and correct maintenance of the boat. Please read the manual carefully and familiarise yourself with your boat before using it.

However, this owner's manual alone is not meant to be a sufficient source of information on safe boating and seamanship. If this is your first boat or if the boat type is not familiar to you, please make sure you obtain sufficient training and experience in handling and using the boat before heading out.

If you sell your boat, please make sure to pass this manual, along with the equipment manufacturers' manuals, on to the new owner.

For more details, see section [1.2 Your owner's manual](#) on page 7.

1.1 Is this your first boat?

We are really happy to welcome you on board as a captain of your first boat — and that being a Saxdor! Let's get you introduced to some important information so your boat can serve you well on every journey, and both you and the boat remain safe and well taken care of at all times.

- Safety first

We cannot emphasize the importance of safety enough. If you're new to the addictive joy of being a captain, please take the time to carefully read sections [2 Be safe](#) on page 11 and [3 You're the captain](#) on page 22. Although your boat is built to the highest safety standards, it is important that you understand the safety aspects of seamanship and have the necessary skills that allow you to enjoy your yacht to the fullest.

- Consider a boating course

If you are new to the world of seafaring, a course on boating safety and seamanship can help you get the right introduction and a feeling of confidence. Your Saxdor dealer or boating society will be able to guide you on this.

- You may need a driver's licence

Some countries require that you have a licence to operate your boat. There may also be specific regulations and carriage requirements in place. Your Saxdor dealer will know about the requirements in your own country.

- Insurance is a good idea, even if not required by law

Insurance can cover for any damage that may occur whenever the boat is being transported and stored, and in use.

Your Saxdor dealer and/or local authorities can provide you with information about insurance requirements in your area. You can also contact insurance companies directly for information on the various alternatives available.

- Registration

In some regions it may be mandatory to register boats of your boat type. Operating the boat may also be subject to holding a license or other qualification. In addition, minimum age requirements may apply.

If unsure, check with your Saxdor dealer.

1.2 Your owner's manual

Learn more about the contents and availability of the user documentation.

The latest version of your manual is always available in the Saxdor share portal. You can check for updated versions for your model year at manuals.saxdoryachts.com.

This manual describes all the options available for this boat model. The configuration on your boat may vary depending on the equipment you have selected, and some of the options may not be available in your region.

The equipment manufacturers' manuals complement this owner's manual. They are included in the Saxdor documentation bag that comes with your purchase.

In case of any difficulties, contact your Saxdor dealer representative for advice and assistance. Saxdor contact information is available at www.saxdoryachts.com.

1.2.1 Structure of this manual

The information you will find in the following sections of this manual is organized as follows.

- Be safe

A guide on the steps you need to take to ensure you, your crew, and your guests remain safe at all times whenever on board.

- You're the captain

Get to know how your boat operates, and take control. This manual is, however, not a course on seamanship or boating safety. For the comfort and safety of both yourself and your crew and guests, please ensure you take a boating and seamanship course, or otherwise gain the handling and operating experience you need, before taking the boat out to sea.

- The what and where of your boat

This section is a graphical presentation of the contents of your boat. See the overall layout and positions of equipment on board at a glance, and discover the different components and control functions in detail.

- The how of your boat

Learn how the systems on your boat work. While this section does give some instructions on how to operate the boat, it doesn't provide full step-by-step instructions on the equipment on board. For these, you need to consult the equipment manufacturers' own manuals.

- Respect the environment
What you can do to keep other persons, the sea and mother nature from harm.
- Care for your boat
This section will give you some guidelines on how to best take care of your boat to ensure a long lifespan and maximum pleasure, but it is not a detailed maintenance guide. Consult the equipment manufacturers' manuals for more detailed instructions. We advise you to always turn to a professional service for the maintenance of your boat.
- When in trouble
Some tips for simple troubleshooting.
- The details
All the technical specifications and the dimensions of your boat.
- Extras
Appendices. Links to the full warranty card, wiring diagrams, and equipment manufacturers' websites. Also a glossary of some important terms, and a summary of warnings and cautions that occur in this manual.

1.2.2 Equipment manufacturers' manuals

The Saxdor documentation bag includes a hard copy of the manuals or quick guides of the equipment that you have selected for your boat.

In case of missing documents please contact your local Saxdor dealer for replacement documents.

1.3 Copyright and disclaimer

Property rights / Copyrights

1. The information included in this document remains the exclusive property of Saxdor Yachts Ltd (hereinafter "Saxdor")
2. Under this document, or in any other act that has been performed in the process of the purchase of the Saxdor boat (hereinafter "Product"), Saxdor does not convey licenses or other rights of any kind, including but not limited to, rights to know-how, patents, utility models, designs, copyrights or other industrial property rights or titles, be it expressed, implied or tacitly.
3. Except for the right to utilize the Product and this document, the issuance of the document does not constitute an express or implied grant to any rights to or under Saxdor's patents, copyrights, trade secrets, trademarks or other intellectual property rights. The owner/recipient of this manual and of the Product (hereinafter "User") will not use any tradename, trademark, logo or any other proprietary rights of Saxdor or any of its affiliates in any manner without a prior written authorization of such use by a duly authorized representative of Saxdor.
4. The User is prohibited from registering his/hers own industrial property rights, such as patents, registered design or utility models, on the basis of the information obtained or received with this document or in connection with the Product purchase, as well as otherwise exploit the information included in this document for commercial gain.

Disclaimer

1. This document is provided "as is". The information in this document is believed to be accurate and reliable. However, Saxdor is not responsible for the content of this document, insofar as legally permissible, and makes no representations or warranties, express or implied, as to the accuracy or

completeness of such information and shall not be liable for the consequences of the use of the information included.

2. This document, unless explicitly otherwise indicated, does not include any implied warranties of satisfactory quality, merchantability, fitness for a particular purpose, compatibility or non-infringement.
3. Saxdor reserves the right to make changes to the information published in this document, including without limitation specifications and product descriptions, at any time and without notice.
4. This document supersedes and replaces all information supplied prior to the publication hereof.
5. Saxdor products are not designed, authorized or warranted to be suitable for applications where failure or malfunction could result in personal injury, death, or serious property or environmental damage. Saxdor is not responsible for the incorporation and/or use of its products in such situations or applications, and therefore, such inclusion and/or use is at the User's own risk.
6. Neither Saxdor nor anyone else who has been involved in the creation, production or delivery of the Product shall be liable for any special, indirect, consequential, incidental or punitive damages (including, but not limited to, lost revenues, profits and/or savings) arising from reasonably improper use or inability to use the Product, even if Saxdor has been informed of the possibility of such damages or claims.

1.4 Definitions

See here the conventions used in this manual.

Measurement units

Measurement units are, in general, given in accordance with the International System of Units (SI) and the United States Customary Units (USCS). USCS units used in this manual has been calculated from the original SI units. Exceptions:

- Wind force is given in the Beaufort scale (BFT)
- Speed is given in knots (kn).

Figures

All figures are shown for illustration purposes only. Actual product may vary depending on the selected optional features and equipment.

- Details framed in solid red line illustrate areas and equipment locations on your boat.
- Details framed in dotted red line refer to areas or equipment which are inside your boat or not directly visible in the figure.
- Green arrows indicate emergency exits.
- Filled orange circles refer to designated passenger seats.
- Filled orange area with diagonal lines illustrates the working deck area.

Safety symbols

Warnings and cautions are labeled in accordance with the international ISO and ANSI standards.

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠ WARNING

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠ CAUTION

Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury.

NOTICE

Indicates a potential situation which, if not avoided, may result in property damage or in an undesirable result or state.

Gives additional information or calls for attention to the correct use of the product, to the expectations of the user, or to how to avoid error situations.

2 Be safe

A guide on the steps you need to take to ensure you, your crew, and your guests remain safe at all times whenever on board.

2.1 Your responsibilities

Safety is the first step and most important step towards getting maximum pleasure out of your boat. Please familiarize yourself with the contents of this chapter before taking your boat out to sea for the first time.

As the captain of your boat, you have the ultimate responsibility! Not just for yourself, but also for your crew, any guests on board and other seafarers.

⚠ WARNING Risk of collision.

Do not operate the boat outside of inland waterways in foggy conditions, in poor visibility or at night.

⚠ WARNING Neglecting the necessary safety precautions can risk lives.

Take safety seriously. Remember that you as the driver are responsible for the safety for others.

⚠ CAUTION Risk of injury or material damage.

The owner is responsible for ensuring that the normal mode of operation is maintained. This means that the speed of the craft needs to be matched to the prevailing sea state, the craft being used with good seamanship behavior.

Behave responsibly!

- Make sure you and any other persons who will operate your boat have the necessary boating and navigation skills.
- Check that all persons on board, yourself inclusive, are wearing a life jacket at all times.
- Do not let anyone swim around the boat when the engine is running.
- Load the boat correctly within capacity limits.
- Don't drink and drive.
- Do not climb on the roof or use the engine as a stepping platform.
- Be aware of and make sure you comply with all applicable local laws and regulations.
- Make sure the safety equipment complies with local regulations.
- Take good care of your boat and have it serviced regularly. Don't attempt to perform any major repairs by yourself or make modifications to your boat without consulting your Saxdor dealer first.
- Read this manual and the documentation supplied in the Saxdor documentation bag and heed the warnings and cautions in them.

Be prepared!

- Know your boat and understand the safety limitations set on your boat by capacity and design category.
- Proactively maintain your boat to keep it in good condition. Keep an eye on any signs of wear and tear and have them repaired immediately.
- Familiarize yourself with the location of all safety equipment on board, and check that they are fully functional before setting off.
- Make sure you understand all emergency procedures.
- Also make sure that everyone on board is familiar with the correct use and operation of all safety equipment in the event of an emergency.
- Check the weather conditions and forecast before you set off.
- Plan your route and stopovers, and make sure you have the equipment and facilities needed.
- Make sure you are familiar with local laws and regulations concerning reporting accidents.

Be aware of risks and know how to act

Boating always comes with certain risks. Make sure you know how to minimize these risks, and be prepared to act in the event something were to happen.

Learn more

- How to be prepared: [2.5 Avoid emergencies](#) on page 15
- How to act in case of emergency: [2.6 Help!](#) on page 19

2.2 Your safety bells and whistles on board

To ensure carefree and safe boating, your boat is equipped with different safety fixtures. Familiarize yourself with them before setting off on your voyage for the first time.

There maybe different or additional requirements for safety equipment in your country. In some countries it is a legal requirement to wear a life jacket.

This kind of additional safety equipment is not Saxdor's responsibility. Also, it is your responsibility to ensure that the equipment complies with local regulations and that these devices are fully functional. If unsure, consult your Saxdor dealer.

Builder's plate

Start with the builder's plate! It contains important safety information, such as maximum load and number of people, which you must abide by at all times.

Safety equipment and emergency exits

Your boat comes with emergency exits, a CO detector and space reserved for additional safety equipment. Your Saxdor dealer will help you get the additional safety equipment required in your country, such as fire extinguishers and smoke detectors. Take note that safety the equipment may require periodic service or replacement.

Recommended additional safety equipment:

- Cell phone with waterproof case
- Spare batteries
- Waterproof GPS, VHF radio, EPIRB, compass
- Ditch kit, first aid kit
- Survival suit, thermal clothing
- Emergency food and water
- Ring buoy, life jackets, life raft, whistle, mirror, flashlight
- Spare anchor and anchor lines, spare mooring and towing lines
- Fenders and boat hook
- Spare propellers and hardware, spare parts and equipment (pumps, filters, engine oil, fuses) and tool kit.

Life jacket

Life jackets must be stored in an easily accessible location and must be ready for immediate use. Inform all passengers of the location of the safety equipment. Take note that children, disabled people and non-swimmers may need special type of life jackets or special attention and instructions in use of safety equipment. Before setting off, read all necessary instructions provided by life jacket manufacturer.

⚠ WARNING

Risk of drowning.

Neglecting to carry onboard and use life jackets in emergency can cause death and serious injury.

Make sure that your boat is equipped with proper number and type of life jackets.

Make sure that all persons on board, including yourself, are wearing a life jacket at all times.

Life raft

Larger boat may need a life raft. Always store the life raft in the location designated for it. If there is no specific storage place, store the life raft in unobstructed and accessible area.

Read the manufacturer's instructions for deployment, storage and maintenance.

Precautions

Before setting off, make sure:

- All safety equipment is fully functional and easily accessible.
- Everyone on board knows where to find the safety equipment and emergency exits.
- Everyone knows how to use the equipment and how to act in an emergency.
- Everyone wears a life jacket, even if not required by law.

Maintain your safety equipment

- Have the fire extinguisher inspected at the intervals indicated on the device or according to the local legislation. Replace the fire extinguisher if it has been expired.

⚠ WARNING Risk of fire or explosion.

When replacing parts of the fire-fighting installation only matching components shall be used, bearing the same designation or being equivalent in their technical and fire resistant capabilities.

- Test the operation of smoke and CO detectors according to the local legislation.

Safety labels

Your boat is equipped with labels containing important safety information. Make sure:

- You and everyone on board understands the meaning of the safety symbols and the texts on the labels.
- Everyone obeys the instructions on the labels.

Related information

[4.3 Builder's plate](#) on page 43

[4.5.1 Safety equipment and emergency exits](#) on page 44

[4.5.3 Safety labels on board](#) on page 45

2.3 What is builder's plate?

The builder's plate is an certification label and proof of the consistent, high standard of Saxdor yachts. The type of builder's plate vary dependent on the local governing authority.

The builder's plate on your boat is located close to the steering wheel and contains important safety information such as:

- Your boat's design category
- Load capacity (not including fuel)
- Maximum permitted number of persons, engine weight and power
- Boat builder's contact details

The plate also shows the boat builder's contact details.

⚠ DANGER Not heeding the limitations stated on the builder's plate can cause boat capsizing, swamping or sinking.

Do not exceed the maximum permitted engine power or number of persons on board.

Respect the conditions set out by the design category of your boat.

Related information

[4.3 Builder's plate](#) on page 43

2.4 What is design category?

Design category is an important element of safe boating! It defines the weather and nautical conditions in which it is safe to operate your boat.

⚠ WARNING

Not respecting the design category limitations of your boat can put you and your passengers at risk.

Do not exceed the maximum permitted engine power or number of persons on board.

Ensure that the anticipated wind and sea conditions correspond to the design category of your boat.

Always make sure your boat and your operating skills match the weather and water conditions where you are going to operate.

Design category conditions are specified using maximum wind speed and maximum significant wave height as measurement. A significant wave height refers to the average height of the highest one third of all waves, visually estimated.

For example, design category C conditions are typically encountered in exposed inland waters, estuaries and coastal areas in moderate weather conditions. Design category B conditions are more severe — typically encountered offshore, but also in coastal areas and larger inland waters where sheltered areas are not readily available.

Table 2.1 - Design category specification

Description	Category A		Category B		Category C		Category D	
Wind force	Beaufort force exceeding 8		Beaufort force 8 or less		Beaufort force 6 or less		Beaufort force 4 or less	
Significant wave height	>4 m	>13 ft	≤4 m	≤13 ft	≤2 m	≤6.6 ft	≤0.3 m	≤1 ft

What is my boat's design category?

Your boat's design category is indicated on the builder's plate. You can also check it from the Technical specification in this manual.

Your boat's design category is C. So please make sure you follow the safety rules, for example:

- For category C conditions, you can have the maximum number of passengers indicated on the builder's plate on board.

2.5 Avoid emergencies

Know what the risks are, act responsibly, and have a plan.

2.5.1 Avoid flooding and capsizing

Don't compromise stability!

Do not worry! Your boat is designed to be very stable and does not get easily flooded.

Also, remember that when boating, it is normal to get water into the boat. To keep your feet nice and dry, and the boat afloat, there are several drainage openings in the hull. Automatic bilge pumps work non-stop to keep the bilge clear of water. A manual pump complements the automatic pump.

However, stability can be compromised by many things such as rough waters, towing, poorly balanced load and too much water in the bilge. Take these steps to maximize stability:

1. Load your boat right.

- Respect the design category limitations on the number of persons on board.
- Make sure everybody on board is seated in the designated seats.
- Do not exceed the maximum allowed load on the builder's plate.
- Make sure all equipment, accessories and luggage items are stowed and will stay securely in place even in rough sea conditions and strong winds.

WARNING

Any change in the weight distribution may significantly affect the stability, trim and performance of the boat.

When loading the boat, never exceed the maximum recommended load. Always load the boat carefully and distribute loads appropriately to maintain design trim (approximately level). Avoid placing heavy weights high up.

Take into account any modifications that may affect weight distribution, such as a different engine or a fishing tower.

WARNING

Getting entrapped in the cabin and not having quick access to safety equipment can be fatal in case of flooding.

Never lock or block the access to the emergency exits or safety equipment.

Do not store luggage or other heavy items on top of the front deck hatch.

2. Close doors and hatches while under way.

- Always keep all hatches and storage locker lids closed while under way.
- Keep portlights, windows, washboards, doors and ventilation openings closed in rough weather or at planing speed.

WARNING

Getting water into the hatches or inside the boat increases the risk of flooding.

Always keep hatches closed when under way.

3. Keep the drain outlets functional and monitor water levels.

- Always keep the drain holes open. The only time you may close them is in a situation where water starts getting into boat during loading.
- Clear the pump inlets from debris if needed.

- If the seacocks are fitted in the front and aft peak bulkheads, keep them closed. You may only open them in order to let water drain into the main bilges.
- If you notice that there is more water than usual in the bilge, or if you get the high bilge water alarm, check your boat for leaks and damage to the hull. Use the manual bilge pump to pump out the excess water.

⚠ WARNING Risk of flooding.

Getting water inside the boat increases the risk of flooding.

Keep seacocks closed when not needed for operation to minimize the risk of flooding (for example water inlet of toilet flushing line).

2.5.2 Avoid grounding

Shallow waters bring dangers such as sand or rocks. Pay attention to marker buoys and observe your surroundings at all times.

⚠ DANGER Risk of death, serious injury or severe damage to your boat.

Sudden grounding from high speeds can cause serious injury or death and severe damage to your boat.

Rapid deceleration can cause occupants to crash the boat and to be ejected from the boat.

Be aware of your boat's minimal safe depth to avoid grounding.

- Be aware of the local conditions and water depth.
- Drive slowly and with caution when you are in an area you are not familiar with.
- Always check the water depth to avoid grounding.

2.5.3 Move safely on board

To ensure your safety, your boat has designated areas for moving on board and sitting while using the boat.

- Use the working deck area when mooring and leaving the shore.
- Ensure that everyone on board is seated in the designated seating areas during voyage. Do not exceed the maximum allowed number of persons on board.

Related information

[4.5.2 Safe seating and moving areas](#) on page 45

2.5.4 Don't play with fire

Avoid situations that can cause a risk of fire.

Make sure you are familiar with the location of safety equipment and emergency exits on board.

⚠ WARNING

Risk of fire or explosion.

Handle open flame and fuel-driven devices with caution.

⚠ WARNING

Careless refueling is a fire hazard.

Never fill the fuel tank or handle fuel when the engine is running.

Don't smoke when handling fuel.

To minimize the risk of fire, always take these safety measures:

- Be careful not to damage fuel lines.
- Never store fuel containers or equipment containing fuel in any area not designated for the purpose.
- Never obstruct access to the fuel tank compartment, safety controls, electrical systems, ventilation units, safety equipment or passageways to fire exits and hatches.
- Don't make changes to your boat's electrical, ventilation or fuel systems yourself.
- Never leave the stove or heater unattended or have any free hanging curtains or other fabrics near them.
- Check the bilge regularly to make sure that there are no fuel leaks.
- When replacing safety equipment, make sure it complies with local requirements.

⚠ WARNING

Risk of fire or explosion.

When replacing parts of the fire-fighting installation only matching components shall be used, bearing the same designation or being equivalent in their technical and fire resistant capabilities.

Related information

[4.5.1 Safety equipment and emergency exits](#) on page 44

2.5.5 Consider the carbon monoxide hazard

Carbon monoxide (CO) is an odorless but potentially lethal gas! Be aware of and avoid situations in which there is a risk of CO accumulation.

⚠ WARNING

Carbon monoxide (CO) is harmful to your health in higher concentrations, and can even be lethal. Even low concentrations of CO can cause damage with prolonged exposure.

Prevent the accumulation of CO in the first place by minimizing the risk situations.

Act quickly if the CO alarm turns on or if you suspect CO poisoning.

Be aware of CO poisoning signs, such as irritated eyes, headache, nausea, weakness and dizziness, and seek medical attention if necessary.

Engine exhausts contain carbon monoxide (CO). High CO concentrations can occur especially when:

- Running the engine in confined spaces in a standstill, for example with the boat close to another vessel or with the engine next to a wall.
- Driving at slow speeds or in a tailwind.
- Driving with the bow high.
- Running the engine with the cabin door open may cause exhaust fumes to enter the cabin.

To prevent CO accumulation:

- Do not rev or idle the engine unnecessarily, for example when mooring or when there are persons in the water.
- Do not block exhaust outlets and inspect the exhaust system regularly.
- Ensure all areas on the boat are kept well ventilated if you're using a diesel heater or any other fuel-burning device.
- Keep the cabin door closed when running the engine.
- Leave enough space between the engine and any obstacle.

[2.6.5 If you suspect carbon monoxide poisoning on page 21](#)

2.6 Help!

Even though you try to avoid it - emergencies do occur. Being prepared and knowing how to act is the best way to prevent them from getting serious.

⚠ WARNING

Trying to cope by yourself too long can quickly escalate an emergency.

In case you cannot handle the situation, always contact rescue service without delay!

2.6.1 What if your boat is flooded?

When boating, it is normal to get some water into the boat. However, if water starts to accumulate, you need to take action.

⚠ WARNING

Risk of drowning!

The boat can sink or capsize if too much water gets into the boat as the bilge pump system can not remove it all.

The bilge pumping system is not designed for damage control. The combined capacity of the system is not intended to drain the craft in case of damage.

- If you suspect a leak, act quickly.
 - If there is a rapid increase in water accumulation, call rescue service.
 - If you have moderate accumulation of water, reduce the flooding manually. Use the manual pump or a bail.
- Make sure everyone is wearing a life jacket.

- Find out the reason and go ashore as soon as possible.

Related information

[4.5.1 Safety equipment and emergency exits](#) on page 44

[5.4 Draining system](#) on page 66

2.6.2 Actions after grounding

In the event of grounding, keep calm.

WARNING

Risk of serious injury or death.

Any leak, especially a serious one, can cause the boat to sink quickly.

Wear a life jacket at all times and evacuate immediately from a sinking boat.

Your future actions depend on how hard the boat hits the bottom or rocks. If a light bottom contact occurs, you may only need to inspect the hull for damages. Follow the below instructions:

- Stop the engines and lift them out of the water.
- Make sure that all passengers are in the boat and wear life jackets.
- If possible and necessary, call and inform the authorities.
- Check the bilge for leaks.
If a leak is detected, close all the doors and hatches to minimize water accumulation. Remove the water by using the manual bilge pump.
- Turn all the main electrical switches to OFF position.
- Inspect the overall condition of the boat, steering system and engines. Check if there are any damages or leaks.
Do not drive if you detect any leaks from the engines to avoid damaging the engines further.
- Prepare the life raft for use, if equipped and necessary.
- Evacuate yourself and all passengers, if necessary.
- Maneuver the boat to safe waters or nearest shore, if the hull and all operating systems are in good condition.
Make sure that changing the gear to reverse does not cause or increase damages.
- Have the boat checked by a professional service after grounding.

2.6.3 Man overboard!

If a person has fallen into the water.

- Point the boat directly into the wind.
- Stop the engine if it is running.
- Hand the person a flotation device if they are not wearing one.
- Help the person back on board. You can lower the bathing ladder for the purpose.

⚠ WARNING Risk of injury.

Do not use the outboard engine's cavitation plates for reboarding.

Related information

[4.1.5 Bathing platform](#) on page 34

[5.7.6 Bathing ladder](#) on page 78

2.6.4 Fire!

Don't waste time!

- Turn off power from all the power sources.
- Close the fuel valve.
- Check that everyone is wearing a life jacket.
- Use a fire blanket or fire extinguisher to put out the fire. Do not use water!

⚠ WARNING Risk of explosion.

Never use water to put out fuel fire. If the fire gets in touch with a flammable fuel, water can spread the fire and cause an explosion.

- Don't hesitate to call for help and evacuate the boat if the fire starts spreading.

2.6.5 If you suspect carbon monoxide poisoning

If a person has been exposed to carbon monoxide, act quickly!

⚠ WARNING Carbon monoxide (CO) is harmful to your health in higher concentrations, and can even be lethal. Even low concentrations of CO can cause damage with prolonged exposure.

Prevent the accumulation of CO in the first place by minimizing the risk situations.

Act quickly if the CO alarm turns on or if you suspect CO poisoning.

- If the CO alarm turns on:
 - Turn off the engine(s) and all possible devices.
 - Do not use fire or any electronics.
 - Open all the ventilation hatches and doors.
- If a person shows signs of CO poisoning (headache, dizziness, ringing in the ears, nausea, loss of consciousness):
 - Move the person to a well ventilated area and have them breathe fresh air deeply.
 - If breathing has stopped, call rescue service and resuscitate!

3 You're the captain

In this section of the manual we will help you understand how to operate a boat and how to take control.

This manual is, however, not a course on seamanship or boating safety. For the comfort and safety of both yourself and your crew and guests, please ensure you take a boating and seamanship course, or otherwise gain the handling and operating experience you need, before taking the boat out to sea.

3.1 Get going!

You're raring to go, and so is your boat! But before you set off, ensure that you've gone through all the relevant checks.

- Check the weather forecast. Consider the prevailing wind force, wave profile and visibility. Don't exceed the capabilities of your boat's design category.
- Make sure you and your crew have the necessary boating and navigation skills. Agree on the duties for each person before approaching and leaving the shore.
- Make sure you load your boat right. Ensure that your load, including the number of passengers, does not exceed the maximum limit of your design category.
- Check you have all the necessary equipment such as life jackets for all passengers, mooring lines, fenders, functional safety equipment and a compass. Have a print copy of your charts covering a sufficiently large area.
- Refuel the boat and make sure you use the right type of fuel. Check the engine manual, if in doubt.
- Inspect the engine as specified in the engine manual.
- Be prepared for unexpected situations with extra fuel and provisions. Not to forget spare batteries for equipment like phones and flashlight.
- Check that all the critical equipment such as the steering system, navigation lights, horn and bilge pumps are functional.
- Check that the drain seacocks are open, other seacocks closed, hatches closed, and bilge clear of water and fuel.
- Ensure sufficient ventilation of the fuel compartments to reduce the risk of fire. Make sure ventilation channels are unobstructed.
- Make sure you know and obey the right-of-way rule and other navigation rules defined in the International Regulations for Preventing Collisions at sea (COLREG).

When filling the fuel and fresh water tanks, remember that you may not be able to fill up the tanks all the way if the boat is not level due to the trim or an uneven load trim. Therefore, always keep an extra 20% reserve.

[2.5.1 Avoid flooding and capsizing](#) on page 16

3.2 Driving and steering

All aboard? Check out these tips and get cruising!

3.2.1 Get to know how your boat handles

Your boat has its own unique behavior. Learn to know her before entering crowded waters or docks.

Maneuvering the boat

- First practice controlling your boat in open and protected water with enough space.
- Learn how your boat responds to wind, waves and currents from different directions.
- Avoid sudden maneuvers at speed.
- Always be certain you have sufficient distance to stop or maneuver if required to avoid collisions.
- When approaching or leaving the shore, apply the throttle in sharp and short doses to make your steering maneuvers efficient. Avoid sudden steering movements and make sure that all crew members not required to assist in the docking remain seated.
- Practice trimming until you are comfortable using it.
- If you have a twin engine model, practice docking and other behaviors specific to twin engines.
- If you are the driver and must leave the helm station, make sure to shift the engine into neutral.

Using the engine throttle and shift control

- Start the engine(s) and attach the lanyard stop switch cord to yourself.
- Shift to forward or reverse as necessary to get out of the dock.
- When you leave the dock, maneuver and gradually add speed as necessary.
- Always stop at the neutral position and allow the engine idle speed to stabilize before you shift into another gear. Shift into gear with a quick motion.
- Push the control handle gently forward or back until you reach the desired speed.
- Gently pull the control handle back to neutral position when you want to slow down.
- Learn how to trim the boat with the throttle and shift control.

NOTICE

Risk of severe engine damage! Shifting the engine into reverse at forward speeds higher than idling speed could cause the engine to stall and allow water to enter the engine's cylinders.

Drop the speed to idling speed before you shift into reverse.

Related information

[3.2.3 Got the attitude? About trimming your boat on page 24](#)

[3.2.5 Take it up a notch or a few on page 26](#)

[5.2.1.1 Starting the engine on page 62](#)

3.2.2 What is lanyard stop switch?

Don't want your boat to ride without a driver? The lanyard stop switch comes to the rescue.

⚠ WARNING Risk of injury or severe damage to your boat.

A malfunctioning lanyard switch can cause the engine to shut down unexpectedly or fail to shut down when needed.

Do not operate the boat if the lanyard stop switch does not function properly. Lanyard stop switch should be used in emergency situations only.

The lanyard stop switch shuts down the engine if the driver moves too far from the helm station, or falls overboard. The switch with the lanyard is located at the helm station.

The switch doesn't work if the driver is not hooked onto it!

- Always attach the lanyard to yourself immediately after having released the mooring lines.
- Don't forget to release the lanyard when docking so that the engine doesn't stop unintentionally.

Check the engine manufacturer's manual for more details about using the lanyard stop switch.

You may have an option for a wireless lanyard stop switch. If you have this feature, you may use it instead of the fixed lanyard stop switch.

[4.2.1 Helm station controls](#) on page 36

3.2.3 Got the attitude? About trimming your boat

Learn how to trim your boat in order to ensure a smooth cruise and optimal performance.

The trim, or attitude, of your boat is its running angle as it makes way in the water. Running in the wrong trim angle gives you a bumpy ride and loads the engine unnecessarily. Learn how to:

- Adjust the boat's vertical running angle (raise or lower the bow) when getting to planing speed or changing speeds.
- Play with your trim until you find the most comfortable ride while cruising.
- Adjust the boat's heel (lateral angle) when travelling in a crosswind or with an unbalanced load.

You can trim your boat with the joystick at the helm station. By trimming you can adjust:

- The boat's vertical running angle.
- The boat's heel.

You can also trim your boat's vertical angle using the engine throttle and shift control. Trimming changes the propeller shaft angle, which causes the bow to move up or down.

⚠ WARNING

Poor trimming can risk lives! Adjusting the trim angle at high speeds may radically affect your boat's behavior. A high running trim can obstruct the view so you may not notice swimmers and small vessels.

Avoid making adjustments at high speeds.

Don't drive with the bow high for long periods of time. Trim the boat's vertical angle to lower the attitude in congested areas.

See the trim tab manufacturer's manual for detailed instructions on how to use the trim tabs.

See also the engine manufacturer's manual.

Related information

[4.2.1 Helm station controls](#) on page 36

[5.2 Engine and steering system](#) on page 61

3.2.4 See where you're going

To avoid any unexpected dangerous situations, ensure you're always able to see where you are going and what is happening around your boat.

- Make sure that nobody or nothing is blocking the view from the helm station. Pay special attention to the following factors as these may reduce the visibility:
 - Propulsion unit trim angles
 - Hull trim plane angles
 - Loading and load distribution
 - Speed
 - Rapid acceleration
 - Transition from displacement to planing mode
 - Sea conditions
 - Weather conditions, (for example rain, darkness and fog)
 - Interior lights
 - Position of tops and curtains
 - Persons or movable gear in the driver's field of vision.
- Be aware that a high running trim can obstruct the view so you may not notice swimmers and small vessels. Don't drive with the bow high for long periods of time and trim the boat to lower the attitude in congested areas.
- Turn on the navigation lights when it is dark or the visibility is poor.
- Find out beforehand how the windshield wiper works.

3.2.5 Take it up a notch or a few

Despite your Saxdor boat's wow performance, you will resist the urge to show off driving at full speed — being the responsible person you are.

⚠ WARNING Overcorrecting, dropping the speed suddenly or hitting the waves at a wrong angle when driving at high speeds can have serious consequences.

Do not exceed your boating capabilities. Drive at speeds you are comfortable with. Avoid sudden maneuvers.

Always use the lanyard stop switch.

Respect the boat's and your own limits

- The faster you drive your boat, the less of it is connected to the water, and this means the boat feels more responsive to even your small adjustments. At high speed you have less control over your boat at the beginning of a turn.
- Be careful with trimming at high speeds. Don't drive with the bow down.
- When driving in planing mode the boat lifts off the water surface and the air draft increases. Reduce speed when driving under low obstacles such as bridges.
- Do not drive at maximum speed while in congested high traffic waterways, high winds, large waves or when visibility is reduced.
- Do not exceed the maximum recommended engine power shown on the builder's plate and in Technical specifications.
- Secure loose equipment safely when underway.

Be considerate

- Reduce your speed and wake as a courtesy and as a safety consideration to yourself and others.
- Observe and obey the speed limits.
- Respect no wake zones to protect the environment.

3.3 Mooring, towing and anchoring

Check here for tips about mooring, towing and anchoring.

Practice the techniques

- Practice mooring in calm weather, and use large enough fenders.
- Always tow or be towed at a slow speed. Never exceed the hull speed of a displacement boat when being towed.
- When anchoring, make sure you anchor far enough from the shore, and a sufficiently long rope to get a good hold.
- Always lift and secure the anchor when you are not using it.

Strong points for attachment

Your boat has several cleats to be used as strong points for mooring, towing and anchoring.

- When you tow another boat, use the aft cleats.
- When your boat is towed, use the bow cleats.

Some boat models have a separate towing plate in the bow, which you can also use for towing your boat.

- Always use at least two cleats and big enough fenders when mooring at a dock to prevent the boat from moving and scraping against other boats or structures onshore.
- Do not exceed the breaking strength of the strong points. See Technical specification for details.

Mooring, anchoring and towing lines

- Ensure that mooring lines, towing lines, anchor chains, anchor lines and anchors are adequate for the boat's intended use. The lines or chains must not exceed 80 % of the breaking strength of the respective strong point. Preferably, use the towing and mooring lines provided in the mooring package of your boat. If you are unsure what kind of equipment to use, contact your Saxdor dealer.
- Always attach the lines so that they can be released when under load.
- Make sure your mooring lines and fenders are ready at hand for docking.
- Make sure the lines and chains don't get tangled in the propeller.

Related information

[4.6.1 Attachment points](#) on page 50

3.4 Lifting and trailering

Treat your boat well even on land.

You and your boat would rather be on the water, but sometimes you need to lift and transport your boat for maintenance, out-of-the-season storage, or to another location.

It is recommended you use a professional service, unless you're skilled enough and have the right type of equipment for the task.

Lifting

CAUTION

The boat may tip or the lifting straps may slide during lifting if the straps are not attached properly or if the loads move and disturb the balance of the boat.

Empty the bilge and waste water tanks and remove any unnecessary load from the boat.

Do not hook the boat through the aft wings as the straps may slide away.

- Lift the boat only from the recommended lifting points.
- Always use spreader bars when lifting the boat. They distribute the weight of the boat over the two lifting points. Make sure the spreader bars are long enough to protect the hull and side terraces from damage.

Trailing

⚠ CAUTION

Trailing a large load can be a traffic hazard.

Use a trailer that is suitable for the boat.

Do not exceed the trailer capacity.

Secure the boat and the trailer properly.

- Make sure to remain within the limits of the maximum mass indicated in Technical specification (m_T).
- Make sure your vehicle is powerful enough and you know how to maneuver the trailer.
- Use the cleats in the bow of your boat to pull your boat onto a trailer.
- Attach the boat to the trailer from all cleats of your boat.

Check the equipment manufacturers' manuals for more information about safety precautions.

4.6 Hull and deck

See here the features and equipment on the hull and deck.

4.6.1 Attachment points

Check here your boat's attachment points for mooring, towing and attaching onto a trailer.

Figure 4.19 - Attachment points

- | | | | |
|---|---------------|---|--------------|
| 1 | Aft cleats | 3 | Bow cleats |
| 2 | Middle cleats | 4 | Towing plate |

Learn more

- About how to use the cleats: [3.3 Mooring, towing and anchoring](#) on page 26

4.6.2 Lifting points

Check here the approximate locations for the lifting points of your boat as measured from the end of the keel in the aft of the boat.

Figure 4.20 - Lifting points

- 1 Lifting point in the bow
- 2 Lifting point in the aft
- 3 Measuring point in the end of the keel

Table 4.2 - Lifting point locations

Dimension	Description	Value	
A	Minimum distance from the measuring point in the end of the keel to the lifting point in the bow	3.80 m	12.47 ft
B	Minimum distance from the measuring point in the end of the keel to the lifting point in the aft	1.07 m	3.51 ft

Learn more

- How to lift your boat: [3.4 Lifting and trailering](#) on page 27

4.6.3 Hull openings

Your boat has a number of openings through the hull. Check here their locations and their purpose.

The hull openings serve as drains leading excess water away from your boat and as vents for exhaust gases, water system and different tanks on your boat. It is important to keep the vents open and clear from debris and dirt.

Figure 4.21 - Hull openings

- | | | | |
|---|---------------------------------|----|--|
| 1 | Waste water tank vent | 8 | Heater fuel tank vent |
| 2 | Anchor box draining opening | 9 | Aft bilge pump draining opening |

[5.5.3 Accessing seacocks](#) on page 70

[5.5.4 Using seacocks](#) on page 70

5 The how of your boat

Learn here how the different systems on your boat work and how to use them.

If you need more detailed, step-by-step instructions in using the equipment, refer to the equipment manufacturer's manuals provided in the Saxdor documentation bag.

5.1 Electrical system

The electrical system of your boat is a combination of batteries and shore power which covers your power needs onshore and offshore.

⚠ DANGER

Risk of electric shock, fire or explosion.

Remember that water and electricity are a bad combination.

Let only a competent marine electrical technician carry out any installation, alteration or maintenance work to the electrical system.

⚠ WARNING

Risk of death, electric shock or injury.

Working on the electrical installation while the system is energized can cause an electric shock.

Never work on the electrical installation while the system is energized.

⚠ WARNING

Risk of electric shock or damage to the equipment.

Never alter or modify the rated current amperage of overcurrent protective devices.

Figure 5.1 - Electrical system

- | | | | |
|---|--|---|-----------------------------------|
| 1 | Auxiliary battery (for the bow thruster) | 6 | Engine battery |
| 2 | Front cabin fuse panel | 7 | Service battery |
| 3 | Battery control panel | 8 | Shore power battery charger |
| 4 | Power outlet | 9 | Shore power main switch and fuses |
| 5 | Shore power inlet | | |

Related information

[4.2.3 Front cabin fuse panel](#) on page 39

[4.2.4 Battery control panel](#) on page 40

5.1.1 Main switches and indicators

The main switches for the batteries are located in the battery control panel. The shore power main switch and shore power indicator light are located in the aft technical compartment.

- You can use the switches on the battery control panel to turn power off from the batteries to the equipment on your boat when you leave the boat unattended, and turn power on when you return.
- When you switch off the battery power supply, the power supply to the priority equipment stays on. The priority equipment consists of the bilge pumps, fire protection, navigation equipment and other equipment that require non-stop power.
- The shore power main switch needs to be off when connecting to shore power. In addition, the main switch protects the boat from an overcurrent fault and a ground fault.
- The shore power indicator light is on when the shore power is connected and off when disconnected.

Related information

[4.2.4 Battery control panel](#) on page 40

[5.1.4 Shore power](#) on page 59

5.1.1.1 Switching power on and off

To save battery power and for safety reasons, always switch the power off when you leave your boat unattended and switch the power on when you return.

⚠ CAUTION Risk of electric shock.

Do not touch the batteries or electric connections.

To keep the boat afloat and for safety reasons, the priority equipment (bilge pump, fire protection and alarm equipment) keep on operating even when you switch the power off.

- When you leave the boat, use the on/off switches on the battery control panel to switch off power supply from the batteries to the equipment on your boat.
- When you return to the boat, use the on/off switches on the battery control panel to switch on the power supply.

Related information

[4.2.4 Battery control panel](#) on page 40

5.1.2 Fuses

The front cabin fuse panel on your boat contains the fuses for the 12 V battery power. The fuses for the 110 V / 230 V shore power are located in the aft technical compartment.

NOTICE Risk of short circuit, overcurrent and damage to the equipment.

Make sure the amperage of the connected appliances does not exceed the amperage marked on the fuse.

Make sure the equipment and appliances on your boat are intact and properly connected.

- The 12 V fuses are connected to the different equipment and functions on your boat, such as lights, radar and water pumps.
- The priority fuses are connected to the priority equipment: bilge pump, fridge, fire protection and navigation lights. These systems require constant power supply. The systems stay on even when

you switch off the power supply to the other equipment from the battery control panel when you leave the boat unattended.

The smoke detector and the carbon monoxide detector have their own batteries as a backup in case of a power failure.

- The shore power 110 V / 230 V fuses are connected to the battery charger, inverter, power outlets, cooktop and air conditioner unit.

Related information

[4.2.3 Front cabin fuse panel](#) on page 39

[4.2.5 Shore power panel](#) on page 41

5.1.2.1 Resetting tripped fuses

There are two types of fuses on your boat. Each type indicates the tripping differently and need to be reset differently.

When a 12 V DC fuse is tripped:

- The fuse button is up

When a 110 V / 230 V AC fuse is tripped:

- The switch in the fuse is down
- The indicator in the fuse is green

CAUTION

Risk of electric shock or damage to the equipment.

Before you reset the fuse, find out why it has tripped.

1. Reset the fuse:
 - Press the button of the 12 V DC fuse down.
 - Flip the switch of the 110 V / 230 V AC fuse up. The indicator in the fuse turns red.
2. Check that the equipment or appliances connected to the fuse work properly.
If the problem persists, contact a qualified nautical electrician.

Related information

[4.2.3 Front cabin fuse panel](#) on page 39

5.1.3 Batteries

The batteries give your boat 12 V DC power when used offshore.

WARNING

Risk of electric shock, battery overheating, explosion, fire or harmful gases.

Do not block the battery ventilation.

There are several batteries on your boat, depending on the level of equipment you have chosen.

In the aft technical compartment:

- The engine battery powers up the engine on your boat.
- The service battery powers up the other equipment on your boat.

In the cabin technical compartment (under the bed in the front cabin):

- The optional auxiliary battery powers up the bow thruster.

Check the battery manufacturer's manual for more details/information about the batteries and their maintenance.

Related information

[4.2.3 Front cabin fuse panel](#) on page 39

[4.2.4 Battery control panel](#) on page 40

5.1.3.1 Charging batteries

The batteries charge automatically when the engine is running or when your boat is connected to the shore power.

WARNING

Risk of electric shock, battery overheating, explosion, fire or harmful gases.

Do not use external charger on the boat.

- If there is a problem with the battery charging, call a qualified nautical electrician.

5.1.4 Shore power

When onshore, you can run your boat's equipment and charge the batteries with the 110 V or 230 V alternative current (AC) shore power.

The shore power saves you fuel as you do not need to run your engines to charge the batteries.

You can connect your boat from an external power source on shore to the shore power inlet on your boat with the shore power cable.

Inspect the electrical system at least twice a year and check the overcurrent protection / residual current device (RCD) every month.

Related information

[4.2.5 Shore power panel](#) on page 41

5.1.4.1 Connecting shore power

Follow this procedure to connect the shore power cable to your boat.

⚠ DANGER

Risk of death, electric shock or injury.

Connect the shore power cable first to your boat and only then to the power supply onshore.

If you connect the cable in the wrong order and the live power cable comes into contact with water, people on board, nearby swimmers and marine life will be exposed to a potentially lethal electric shock.

⚠ DANGER

Risk of death, electric shock, injury or fire.

Do not alter shore power cable connectors. Use only cable connectors that are compatible with the shore power inlet on your boat and shore power receptacles.

Disconnect the shore power connection when the system is not in use.

NOTICE

Risk of damage to the electrical equipment on board.

Check the reverse polarity indicator on the shore power panel of your boat to make sure the polarity of the power source onshore matches your boat.

1. Turn the shore power main switch / Overcurrent protection on the fuse panel to the OFF position.
2. Turn the boat's on/off switches on the battery control panel to the OFF position.
3. Turn the dock side power switch to the OFF position.
4. Check that the shore power cable is intact and dry.
5. Connect the shore power cable into the boat receptacle.
6. Connect the cable to the power source at the dock.
7. Turn the dock side power switch to the ON position.
8. Turn the boat's on/off switches on the battery control panel to the ON position.
9. Turn the shore power main switch / Overcurrent protection on the fuse panel to the ON position.
10. Check that the **Reverse polarity** indicator on the shore power panel on your boat is green.
 - If the **Reverse polarity** indicator is red, disconnect the shore power cable immediately.
 - Contact the shore power service provider to correct the polarity issue before re-connecting the shore power.
11. Check that the shore power indicator on the fuse panel on your boat is red.
 - If the indicator light is off, disconnect the shore power cable and find out the reason for the failed connection before proceeding.

5.1.4.2 Disconnecting shore power

Follow this procedure to disconnect the shore power from your boat.

1. Turn the shore power main switch / Overcurrent protection on the fuse panel to the OFF position
2. Turn the boat's on/off switches on the battery control panel to the OFF position
3. Turn the dock side power switch to the OFF position.

4. Disconnect the shore power cable from the shore power source.
5. Disconnect the shore power inlet on your boat.

Close the shore power inlet cover tightly.

6. Check that the shore power indicator light in the fuse panel is off.

5.2 Engine and steering system

You can steer your boat and control the engines, trim tabs and bow thruster from the steering console at the helm station.

Figure 5.2 - Engine and steering

- | | | | |
|---|-----------|---|---|
| 1 | Engine | 3 | Engine, trim tabs and bow thruster controls |
| 2 | Trim tabs | 4 | Bow thruster |

Learn more

- How to use the engine controls, lanyard stop switch and how to trim your boat: [3.2 Driving and steering](#) on page 23

Related information

[4.2.1 Helm station controls](#) on page 36

5.2.1 Engine

The engine on your boat is a powerful, industry-leading outboard engine.

Before using the engine, check the engine manufacturer's manual for more detailed instructions for use and maintenance.

You can check your boat's engine model and serial number from the label on the engine. See Technical specification for the make and type of the engine(s) on your boat.

NOTICE

Risk of damage to the hull or engine fixing points.

Do not exceed the maximum engine power shown on your boat's builder's plate.

5.2.1.1 Starting the engine

Read the engine manufacturer's manual before starting the engine.

NOTICE

Neglecting the break-in period for a new engine may cause engine damage or result in poor engine performance.

For instructions for breaking in the engine as well as other more detailed instructions for using the engine, check the engine manufacturer's manual.

1. Before starting the engine, make sure there are no fuel or oil leaks and there is enough fuel in the tank.
2. Turn on the main switch.
3. Set the lanyard stop switch to the RUN position.
4. Check that the gear shift is in neutral.
5. Start the engine as described in the engine manufacturer's manual. If your boat has two engines, make sure to start them both.

5.2.2 Trim tabs

You can use the trim tabs to control the running angle of your boat. The optional Active Trim system handles the trimming process automatically.

Learn more

- About the basics of trimming and the trim tabs on your boat: [3.2 Driving and steering](#) on page 23

5.2.3 Bow thruster

A bow thruster provides lateral thrust and thus makes your boat easier to maneuver when docking and undocking.

The bow thruster shuts off automatically in 6 to 9 minutes after last use. Check the bow thruster manufacturer's manual for more details.

Check the engine manufacturer's manual for more detailed instructions for use and maintenance.

5.3 Fuel system

Your boat's engines run on gasoline. The optional heater system is powered by diesel fuel.

⚠ WARNING Hot engine parts could cause a fire if in contact with flammable materials.

Store equipment that contains gasoline only in compartments designed for this purpose.

Gasoline fuel system installed on your boats is designed to meet EPA regulations. The system prevents spit back when filling the tank and lowers the evaporative emissions through the tank and vent. The fuel system contains gasoline fumes detector system, fuel tank, fuel tank vent lines, fuel tank fill line and fuel feed lines.

Figure 5.3 - Fuel system

- | | | | |
|---|---------------------------------|---|-----------------------------------|
| 1 | Diesel fuel filling inlet | 3 | Gasoline tank ventilation opening |
| 2 | Diesel tank ventilation opening | 4 | Gasoline fuel filling inlet |

You can monitor the gasoline fuel level in the tank on the chartplotter display. Always use high-quality gasoline that meets the requirements stated in the engine manufacturer's manual.

⚠ CAUTION Risk of fire, explosion or material damage.

Avoid damaging the fuel lines on your boat. Pay attention to the location and condition of the fuel lines.

Check the engine and heater manufacturer's manuals for more information on:

- Instructions for use and care
- Detailed refueling instructions
- Suitable fuel types

Gasoline fumes detector system

Read the manufacturer's instructions provided in the Saxdor documentation bag.

Your boat may be equipped with gasoline fumes detector. The display unit of the system is installed near the helm. When gasoline fumes appear, red led light will occur and audible alarm will sound. In the event of alarm, immediately have all passengers exit cabins and boat if possible. Ventilate the bilge and carefully check all fuel lines and other potential sources of gasoline fume leaks. If leaks are identified shut off the fuel supply and make necessary repairs.

The gasoline fumes detector system should be tested periodically according to the manufacturer's recommendations. It is recommended to replace the gasoline fume sensors every three to four years.

Fuel tank

Aluminum fuel tank is installed in dedicated ventilated compartment.

The fuel level should be measured when the boat is not moving.

Fuel tank vent and fuel tank fill

Fuel fill deck fitting is marked GAS and allows refueling tank.

Fuel tank vent allows vapors to vent from tank during thermal expansion of fuel and while refueling. It allows fresh air flow into the tank during thermal contraction of fuel and when engine(s) are running. The vent prevents water from passing into fuel system.

Fuel tank ventilation line is equipped with carbon canister that absorbs hydrocarbons.

Fuel filter

Your boat's fuel system is equipped with fuel filter(s). Filters can be located in fuel feed line or as a part of engine set. Fuel filter(s) protect the engines from debris.

Fuel valve

The fuel tank's fuel intake is routed to the engine(s). There are manual valves for each fuel line. The manual fuel valves should be open during normal operation. In case of emergency or during storage, the valves should be closed.

Learn more

- How to minimize risk of fire: [2.5.4 Don't play with fire on page 17](#)

Related information

[8.1 Technical specification](#) on page 88

5.3.1 Selecting fuel type

Your engine(s) are designed to operate safely on fuel with a maximum of 10% ethanol.

Ethanol in gasoline attracts water and can absorb moisture from the atmosphere or marine environment through the fuel tank vent system. In time, it may cause fuel phase separation. Ethanol attaches itself to water molecules and drops to the bottom of fuel tank. If the ethanol/water phase reaches the fuel inlet, it can be drawn into the engine and cause poor performance or even damage.

- Avoid using fuel with more than 10% ethanol as the metal, rubber or plastic components in the engine and fuel system are not designed to tolerate the corrosive effects of an ethanol blend higher than 10%.
EPA currently allows using a maximum of 10% ethanol blended gasoline.
- Contact your local Saxdor dealer when replacing fuel system components.
Fuels with ethanol can damage the fuel system components not produced with acceptable ethanol-compatible materials.
- Purchase ethanol-free gasoline when possible to avoid phase separation.
- Keep the fuel tank filled between outings or before long-term or offseason storage.
 - a) Remove all fuel from the tank completely when preparing to store the boat for extended periods (of two months or more).
 - b) You can also store your boat with fresh ethanol- free fuel that has been treated with a marine-rated fuel stabilizer.
 - c) Shut off the fuel line using the manual valve installed on the fuel tank.

5.3.2 Refueling

Before refueling, ensure the engine is turned off, all electrical systems are shut down, and the boat is securely docked. Check the fuel tank capacity, use the correct fuel type, and have the proper equipment, such as a spill containment pad, to prevent accidents and maintain environmental safety. While refueling, be aware of the static electricity generated when gasoline passes through the hose as it can ignite gasoline vapors. Grounding a boat when refueling on land is a safety measure to prevent any electrical current from creating a spark that could ignite the fuel. The grounding process creates an electrical connection between the boat and the ground, which neutralizes any static charge that may have built up on the boat surface.

⚠ WARNING Risk of explosion.

Smoking or using any flame or spark-producing device near fuel can ignite the fuel and cause an explosion.

Never smoke or use any flame and spark-producing objects within 15.2 meters (50 feet) of the boat while fueling.

⚠ WARNING Risk of explosion.

Storing fuel or fuel-containing equipment in improper areas can lead to an explosion if exposed to sparks or flames.

Do not store fuel or fuel-containing equipment in cockpit compartments that are not specifically designated for fuel storage.

Gasoline is highly flammable and explosive, and its vapors can be ignited by an open flame or spark. If you smell gasoline, immediately turn off your boat's engines and all electrical systems and devices until the source of the odor is identified and the issue is resolved. The risk of a fuel fire increases during refueling.

- Never fuel the boat in unsafe conditions.
- Before starting to refuel, turn off the engines and all electrical systems and devices.
Close all doors, windows and hatches.
- Use only certified fuel containers and store them in designated areas.
Fuel storage must be well ventilated.
- To prevent static sparks, fill the fuel tank slowly and ensure direct contact between the fuel nozzle and tank opening. To discharge any buildup static electricity, touch a metal part of the boat exterior.
- Never leave the nozzle unattended during the fuel fill.
When the fill nozzle shuts off, the tank is full.
- Secure the fill cap tightly after refueling.
- Check the boat surfaces for fuel spillage and clean if necessary.
Dispose rags or waste on shore.
- Ventilate areas where gasoline vapors may accumulate after refueling and before starting engines.
Open doors, windows and hatches.

5.4 Draining system

Your boat's draining system comprises a cockpit gravity draining system, an automatic bilge pump system, and a manual bilge pump system.

⚠ WARNING Risk of drowning!

The boat can sink or capsize if too much water gets into the boat as the bilge pump system can not remove it all.

The bilge pumping system is not designed for damage control. The combined capacity of the system is not intended to drain the craft in case of damage.

Cockpit draining system

Your boat is equipped with four cockpit drains and two engine well drains. Two of the cockpit drains are located in the middle of the boat and are connected via a reinforced hose to the hull openings with seacocks. Another two deck drains are located at the aft of the boat.

Keep the deck drains clean and free of debris.

Automatic and manual bilge pump systems

Your boat is equipped with three electric bilge pumps and a manual bilge pump.

See the bilge pump manufacturer's manuals for instructions on how to use and maintain the pumps.

Figure 5.4 - Automatic bilge pumps

- 1 Automatic bilge pumps

Figure 5.5 - Manual bilge pump and automatic bilge pump controls

- 1 AFT, MID and FWD bilge pump controls
- 2 Manual bilge pump

Learn more

- How to ensure stability: [2.5.1 Avoid flooding and capsizing](#) on page 16

Related information

[4.6.3 Hull openings](#) on page 51

[7.10 Maintaining bilge pumps](#) on page 87

5.4.1 Using bilge pumps

If there is water in the bilge, the automatic bilge pump system activates and pumps out any extra water buildup from the bilge. A manual pump is available as a backup if there is no electricity.

⚠ WARNING The boat can sink if too much water gets into the boat.

If you suspect a leak, find out the reason and go ashore as soon as possible. The bilge pump system is not designed to pump out large amounts of water.

If there is a rapid increase in water accumulation, call rescue service.

Normally, you don't need to do anything other than monitor the water buildup. The automatic bilge pumps detect water in the bilge and automatically pump out water when required.

You can also control the automatic bilge pump system from the Navigation and lighting control panel on the steering console. A light on the panel illuminates when the pump is on.

- If water starts building up, start the pump from the panel manually if the automatic start doesn't work. Use the manual pump if the automatic pump is out of order or out of power.

Related information

[4.2.1.1 Navigation and lighting control panel](#) on page 37

5.5 Fresh and waste water systems

The fresh water system provides you water for everyday use and the waste water system allows you to collect the waste water for discharging it when in dock.

When you leave the boat unused for a longer period of time or store the boat over winter, the fresh and waste water systems can build up bacteria and impurities, or freeze in cold weather. Before you leave or store your boat, empty the fresh and waste water systems and tanks and flush them with fresh water.

Figure 5.6 - Fresh and waste water systems

1	Fresh water filling inlet	5	Fresh water tap and sink in toilet compartment
2	Waste water discharge outlet	6	Toilet and toilet compartment control panel
3	Waste water tank	7	Fresh water tap and sink in wet bar
4	Fresh water tank	8	Fresh water shower

The fresh and waste water systems have each their own plumbing and tanks.

- The fresh water system provides water to the shower on the bathing platform and to the taps in the wet bar and in the toilet compartment.
- The waste water system collects the waste water from the toilet as well as from the sinks in the toilet compartment and wet bar.
- The toilet operates electrically. The electrical toilet uses fresh water for flushing.
- Waste collected in the holding tank can be disposed of through the waste discharge outlet or directly overboard using the macerator pump and seacock. Whenever possible, empty the waste water tank into a fixed onshore waste water tank.

NOTICE

In certain waters, you could be fined for having an operable direct overboard discharge.

To avoid this, close the waste discharge seacock, remove the handle or take other precautions.

5.5.1 Using the fresh water system

These instructions help you to use the fresh water system and to keep it clean.

- Fill the fresh water tank from the filling inlet marked with the text **Water**. To ensure you always have enough fresh water, top up the tank whenever you have the chance.
- If the water pressure is low, press the **Fresh water pump** button on the toilet compartment control panel to switch on the fresh water pump. The pump switches off automatically when the system has generated enough water pressure.
- Empty, flush and refill the tank with fresh water at regular intervals to prevent a buildup of bacteria and impurities.

Related information

[4.2.2 Toilet compartment control panel](#) on page 38

5.5.2 Using the toilet

Your boat may be equipped with electrically operated marine toilet.

- Press the **Toilet flush** button in the toilet compartment control panel to flush waste to the holding tank.

NOTICE

Risk of damage to the waste disposal system and harm o the environment.

Never flush facial tissue, paper towels, or sanitary napkins in the marine toilet as they can damage the system and harm the environment.

Related information

[4.2.2 Toilet compartment control panel](#) on page 38

5.5.3 Accessing seacocks

Your boat has three seacocks. Check here how to access them.

- Open the hatch in the cabin floor under the stairs to access the black water seacock.
- Open the access plates located on the deck port and starboard inner side to access the cockpit draining seacocks. Keep seacocks closed when underway.

Related information

[4.6.5 Seacocks](#) on page 53

5.5.4 Using seacocks

Manually operate the seacocks to control the water flow into or out of your boat.

⚠ WARNING Risk of flooding.

Getting water inside the boat increases the risk of flooding.

Keep seacocks closed when not needed for operation to minimize the risk of flooding (for example water inlet of toilet flushing line).

1. Locate the seacock that you want to open or close.
The handle may be a lever or a round knob.
2. Turn the handle.
 - To open the valve turn the handle a quarter turn (90 degrees) in the direction of the water flow. The handle is fully open when the handle aligns with the flow direction.
 - To close the valve turn the handle a quarter turn (90 degrees) in the direction opposite to the water flow.
3. Check that the seacock is working properly.
 - Confirm that the water is flowing freely through the seacock.
 - If it is difficult to turn the handle or if there is resistance, inspect for any debris or corrosion.

5.5.5 Emptying the waste water tank using the waste discharge outlet

Always empty the waste water tank into a fixed waste water tank onshore.

⚠ CAUTION Pollution and health hazard.

Emptying waste water tanks into the water can cause water eutrophication and visual pollution in coastal areas.

Do not empty the waste tanks into the waters where it is not allowed by the law.

Plan your voyage in a way that you can always reach shore with proper fixed waste water tanks in good time before your waste water tanks get filled.

NOTICE Risk of damage to the waste disposal system.

Toilet paper can accumulate in the tank bottom making it more difficult to empty.

Empty the waste tanks before they become full.

1. Make sure the seacocks in the waste water openings on your boat are closed tightly.
2. Connect the suction hose from the shore tank to your boat's waste water discharge outlet marked with the text **Waste**.
3. Turn on the waste water pump of the shore tank.
4. Hold the suction hose tightly in place in the discharge outlet during the whole emptying process to prevent any accidental spilling onto the deck or into the water.
5. When the waste water tank is empty, turn off the waste water pump on the shore.
6. Disconnect the suction hose from the discharge outlet on your boat and close the outlet lid tightly.

Related information

[6 Respect the environment](#) on page 80

5.5.6 Emptying the waste water tank using the toilet pump button

Waste water tank can be emptied using the macerator discharge pump and seacock.

1. Open the black water seacock.
2. Press the **TOILET PUMP** button in the toilet compartment control panel to empty the holding tank.
3. When the tank is empty, release the **TOILET PUMP** button and close the black water seacock.

NOTICE

Risk of damage to the waste disposal system.

Pressing the **TOILET PUMP** button with black water seacock closed can cause damage to the waste disposal system.

Before pressing the **TOILET PUMP** button, make sure that the black water seacock is in the open position. Keep the black water seacock in the closed position when not used.

Related information

5.6 Navigation equipment

Your boat is equipped with the navigation equipment of your choice. See the equipment manufacturers' manuals for details for instructions for their use.

Figure 5.7 - Navigation equipment

- | | | | |
|---|-------------------------------|---|-----------------|
| 1 | Navigation lights | 6 | Horn |
| 2 | Windshield wiper | 7 | VHF+AIS antenna |
| 3 | Navigation equipment controls | 8 | Anchor light |
| 4 | Echosounder transducer | 9 | Radar dome |
| 5 | GPS antenna | | |

Navigation lights, horn and windshield wiper

Your boat is equipped with LED navigation lights, anchor light, horn and windshield wiper. The control buttons for all these are on the steering console.

Chartplotter displays

You can control the following navigation equipment via the chartplotter displays on the steering console:

- Chartplotter
- Echosounder
- Radar

VHF and AIS

The VHF radio and AIS controls are available on the integrated VHF and AIS handset on the steering console.

Related information

[4.2.1 Helm station controls](#) on page 36

5.6.1 Accessing the navigation light fixtures

Here you can find information on how to access the navigation light fixtures of your boat.

- Access the bow navigation light fixtures via the anchor compartment hatch.
- Access the top navigation light fixtures from the roof.

Contact your Saxdor dealer for replacement light sources.

5.7 Comfort and fun

Find out here what fun and comforts your boat offers offshore, and how to protect the boat's interior and surfaces when in dock.

5.7.1 Heating

Your boat's heating system comprises a heating unit, heating distribution lines, a diesel fuel tank and a diesel fuel filling inlet.

⚠ WARNING Risk of fire or carbon monoxide accumulation.

Do not block the heater's exhaust pipe, ventilation or warm air outlet.

You can operate the heating from the temperature control panel in the front cabin.

The heater runs on diesel fuel.

Check the manufacturer's manual of the heating system for more details about using the equipment.

Related information

[4.2.6 Temperature control panel](#) on page 42

[4.6.3 Hull openings](#) on page 51

[5.3 Fuel system](#) on page 63

5.7.2 Wet bar

The wet bar offers you full cooking facilities when onboard.

⚠ WARNING Risk of fire or overheating.

Do not close the lid of the wet bar when the cooktop is hot.

Figure 5.8 - Wet bar

- | | | | |
|---|---------------------------------|---|---------------|
| 1 | Cup, bottle and utensil holders | 5 | Wet bar lid |
| 2 | Sink | 6 | Fridge |
| 3 | Fresh water tap | 7 | Storage boxes |
| 4 | Cooktop | | |

Cooking is quick and efficient with the electrical induction cooktop. You can use the cooktop when you are connected to the shore power.

For safety and hygiene reasons, close the lid when the cooktop has cooled down and when you are not using the wet bar.

The fresh water tap and sink provide fresh water for cooking and doing the dishes.

If the water pressure is low, use the **Fresh water pump** button on the toilet compartment control panel to switch on the fresh water pump.

You can keep your cold drinks and foodstuff cold in the fridge and dry goods dry in the storage boxes.

The fridge temperature control and on/off switch are inside the fridge.

Related information

[4.2.2 Toilet compartment control panel](#) on page 38

[5.5 Fresh and waste water systems](#) on page 68

5.7.3 Seating

Your boat can have different optional setups for seating.

Figure 5.9 - Seating setups

1. Seating option:

- In the cockpit: one swivel seat for the driver and one for the front passenger.
You can lift the front section of the seat up to allow driving in a semi-standing position.
You can rotate the seats, move them back and forth and lock / unlock the seats from their locking handles.
- On the aft deck: three passenger seats, a folding table and a wet bar.
- On the foredeck: a sun bed with removable cushions.

2. Seating option:

- In the cockpit: an adjustable twin sofa in place of the cockpit seats.
- On the aft deck: an extendable twin sofa, a wet bar and a table.
You can lower the table down and extend the sofa into a sun bed.
- Sun bed on the foredeck.

3. Seating option:

- In the cockpit: an adjustable twin sofa.
- On the aft deck: a twin sofa extended into a sun bed, a wet bar.
- Sun bed on the foredeck.

4. Seating option:

- In the cockpit: an adjustable twin sofa.
- On the aft deck: a twin sofa extended into a sun bed, no wet bar.
- Sun bed on the foredeck.

⚠ WARNING

Risk of death or serious injury.

Failure to lock the seat can cause you to be ejected from the seat.

Lock the cockpit seat when you drive.

Related information

[4.5.2 Safe seating and moving areas](#) on page 45

5.7.4 Sun shade

The sun shade keeps you and your passengers cool when the boat is stationary.

⚠ CAUTION

Risk of injury or material damage.

Do not drive the boat when the sun shade is up. The sun shade and mounting poles may tear off.

Do not use the sun shade in harsh weather conditions and in strong wind.

You can set up, attach and lock the sun shade to the mountings on the foredeck.

5.7.5 Water ski pole

The water ski pole offers you a safe way to do water sports.

⚠ WARNING

Risk of serious injury or material damage.

The water ski pole and its mounting may tear off and cause damage and injury.

Use the pole only for water skiing. Do not use it for towing other boats, vessels or water toys.

⚠ CAUTION

Risk of injury or material damage.

Do not attach the water ski rope to cleats or other parts of the boat.

Attach and lock the water ski pole to the mounting on the bathing platform.

5.7.6 Bathing ladder

The bathing ladder on the bathing platform allows swimmers to go into the water and reboard safely and unattended. In addition, it is a safe way to rescue people from the water.

⚠ WARNING A rotating propeller may cause death or a serious injury.

Shut off the engine when there are people in the water near the boat.

Do not reboard the boat when the engine is running.

Do not use the engine's cavitation plates for reboarding the boat.

⚠ CAUTION Risk of injury or material damage.

Do not block access to the bathing ladder.

Do not drive the boat when the bathing ladder is down.

The bathing ladder is secured in place under the bathing platform. The bathing ladder is easy to pull out and extend even when you are in the water.

Learn more

- How to rescue people from the water: [2.6.3 Man overboard!](#) on page 20
- Where the bathing ladder is located: [4.1.5 Bathing platform](#) on page 34

5.7.7 Harbor covers

When you store your boat for the off-season, protect the seats, windshield and other surfaces from the sun, rain and dirt with harbor covers.

⚠ CAUTION Risk of injury or material damage.

Do not use the harbor covers when driving. The covers may tear off in strong wind.

5.7.8 Lighting and audio

Lighting

Your boat is equipped with LED lighting in the front cabin, on the cockpit and on the deck. You can adjust cockpit and deck lights from the control panel at the helm station.

Audio

Depending on the options you choose, your boat can be equipped with a Hi-fi audio system with the audio device, amplifier, subwoofer and speakers.

Check the audio equipment manufacturer's manuals for more information on the features and the use of the equipment.

Related information

[4.2.1.1 Navigation and lighting control panel](#) on page 37

6 Respect the environment

As the proud captain of a Saxdor boat, you have the responsibility to protect the marine environment. Ensure that you and your crew comply with the environmental laws like the International Convention for the Prevention of Pollution from marine vessels (MARPOL) and the local regulations in the area where you are boating.

6.1 Handling waste properly

Follow these tips to ensure you are handling your boating waste properly.

- Never throw garbage or waste into the sea or on the shore.
- Never pour down sink substances that are harmful to the environment - even if your boat had a grey water tank that ensures that water does not drain directly into the sea from the sink.
- Never pump dirty bilge water into the sea. For dirty bilge water, use a separate container and dispose of it as hazardous waste.
- Check the bilge water regularly for contaminants like oil, diesel, or glycol.
- Do not empty the waste water tanks into the sea. Constantly monitor the level of your waste water tanks and plan your trip so that you can always empty the tanks at port.

6.2 Avoiding contaminant spills

Follow these tips to avoid contaminant spills.

- Take care not to spill fuel, oil, detergents or solvents into the sea. Keep oil absorbent material on board at all times in case of a spill or leakage.
- Do not overfill the fuel tank. Make sure fuel does not overflow into the sea from the fuel ventilation opening.
- When caring for your boat, do not use substances harmful to the environment. Follow the local regulations concerning acceptable cleaning agents, waxes and paints.

6.3 Minimizing emissions and disturbance

Follow these tips to minimize emissions and disturbance when boating.

- Have the engine and propeller serviced by an authorised professional.
- Adjust your speed to avoid disturbance and shoreline erosion caused by waves that your boat creates.
- To reduce fuel consumption and to avoid disturbing others, do not idle or rev the engine unnecessarily.
- Do not load your boat with unnecessary items as extra weight uses more fuel.
- Keep the hull of your boat clean to reduce the amount of drag.
- Maintain the optimal trim of the boat as it affects the fuel consumption.

6.4 Preventing the spreading of aquatic invasive species

Follow these tips to prevent the spreading of harmful watercraft-borne marine life.

Figure 6.1 - ABYC T-32 aquatic invasive species label

The American Boat and Yacht Council (ABYC) has classified certain species of marine life as harmful aquatic invasive species (AIS). These species are plants, animals and microbes which can attach themselves to your boat or to your trailer, or which can find their way to the water systems or water deposits on your boat.

- Take necessary precaution when moving between different bodies of water to prevent the spreading of the AIS.
- Take necessary purification measures for your boat to eradicate the AIS.

The purification measures include (but not limited to) physical cleaning, draining and drying, as well as decontamination of the surfaces and water systems or water deposits on your boat.

- To clean the boat, inspect and remove all aquatic plants, animals, mud and debris from the boat, engine, trailer, anchor and any watersports equipment. Rinse, scrub or wash, as appropriate, impurities away from the hull openings and seacocks. Use hot water, when possible. Flush the engine according to the manufacturer's recommendation.
- To drain the boat, completely drain all the water from the boat and its compartments, including but not limited to bilge, wells, lockers, ballast tanks and engines.
- To prevent the spreading of the AIS after purification of the boat, allow the boat dry completely before visiting any other bodies of water.
- Contact your Saxdor dealer for more information about the prevention of the AIS.

7 Care for your boat

This section provides only general guidance for the maintenance of your boat. For more details, check the equipment manufacturer's manuals, which are included in the Saxdor documentation bag.

Saxdor Yachts cannot be held responsible for modifications not approved by the company.

Always use trained and competent people for maintenance, repair or modifications.

Modifications that may affect the safety characteristics of the boat need to be assessed, executed and documented by competent people.

To ensure safety, and the validity of your boat's warranty, have the boat regularly and professionally maintained and serviced. Contact your Saxdor dealer for information about authorized boat service providers.

Make sure your Saxdor dealer has registered your boat's engine and other third party equipment with the equipment manufacturers to activate the warranty. Warranty registration helps you in any service related issues with the equipment.

Routine inspection, service and maintenance of your boat and all its systems and components are crucial for your safety. Intervals between necessary inspections may vary depending on the environment where the boat is used.

7.1 Maintaining your boat's gel coat surface

Your boat's gel coat is exposed to environmental conditions such as saltwater, temperature variation, UV exposure and marine life that can cause it to deteriorate. Protect your boat's gel coat surface as any growth affects the boats' performance and appearance.

CAUTION Risk of injury or material damage.

Chemicals and harmful gases may be dangerous to people or may cause material damage to your boat.

When using chemicals, read the manufacturer's instructions regarding safety and maintenance.

Wear protective equipment and work in a well-ventilated space.

NOTICE Risk of damage to the hull.

Using detergents containing chlorine, acids or similar can damage the hull.

Use only cleaning products that are intended for marine use and free from chlorine, acids or similar.

- Wash and clean your boat regularly.
The best practice is to do this after every trip.
- If a pressure washer is used for cleaning the gel coat surfaces, use a wide fan nozzle.

- a) Do not concentrate high pressure on a small surface area.
 - b) Do not spray water directly on electronic equipment as it may damage them.
 - c) Clean the gel coat surfaces using warm fresh water and a mild detergent intended for the marine industry. You can use a brush with soft bristles.
- Clean any growth from the gel coat surface immediately after lifting your boat from water. If the growth is allowed to dry, it is much harder to remove. For cleaning, you may use a coarse towel or a brush with soft bristles. If the growth is more severe, ask for professional assistance.
 - Inspect the gel coat surface for signs of debris, deterioration or changes in color. Small scratches or discolorations can be fixed by buffing or polishing. Severe scratches, discoloration or oxidation may require wet sanding before buffing, polishing and waxing. Use a buffing compound before using a polishing compound. Follow the product instructions and recommendations.
 - Wax the boat twice a year or annually if it is not used all year. Regular waxing protects the gel coat surface and keeps it in good condition.
 - Clean the surface before waxing.
 - Apply wax and wait until it looks dry.
 - Buff the wax and finish by wiping all residues.
- Use products designed for marine gel coat and read the manufacturer's instructions and recommendations.

7.2 Applying antifouling paint to your boat's hull

Since your boat spends most of the season in the water, applying antifouling paint to the bottom is a good idea. This special paint prevents aquatic organisms from attaching to the hull, slows their growth, and helps maintain your boat's performance and appearance.

⚠ CAUTION Risk of injury or material damage.

Chemicals and harmful gases may be dangerous to people or may cause material damage to your boat.

Wear protective equipment when applying antifouling paint. If your paint contains solvents, work in well-ventilated space.

Make sure to read all the labels, data sheet and manufacturer's instructions and recommendations before starting to apply antifouling paint.

Antifouling may contain biocides. Make sure that they are allowed in the country where your boat is docked.

1. Remove all hardware from the boat before applying antifouling paint. Use tape to cover any items that cannot be removed and may be affected by paint.
2. Clean surfaces and remove greasy and waxy layers.
3. Fill and repair any cracks and corrosion.
4. Sand the boat thoroughly. Always sand away all the old paint.

5. Apply antifouling paint to your boat's hull.

Antifouling paint wears off gradually over time. Usually it must be replaced annually. Humidity and weather affect how and when the new paint needs to be applied. Make sure to always use the same antifouling paint, otherwise all old paint must be removed before applying a different paint.

7.3 Maintaining canvas covers

Your boat may be equipped with canvas covers to protect the boat's upholstery from environmental conditions. Regular care ensures the covers remain waterproof, durable, and properly fitted, helping to preserve the boat's interior, prevent mold and mildew buildup, and extend the lifespan of the covers.

- Install the canvas covers tightly to prevent flapping.
- Clean the canvases regularly, at least twice a year, to prevent dirt from accumulating and to keep canvases in good condition.
All fabrics support growth of mold and mildew. Use anti-microbial treatments to protect the base surface and to prevent spore growth.
- Rinse and soak the canvases with fresh ambient temperature water to clean it and brush off any loose dirt.
Use only gentle cleaning products such as natural soap.
- Dry out the canvases completely after cleaning.
- Store the canvases in dry indoor conditions for the winter. Canvases must not be stored in the boat.

7.4 Maintaining upholstery

Your boat's upholstery is exposed to humidity, salt residue, dirt and UV radiation. Maintain the upholstery regularly to retain their texture.

Your upholstery is not waterproof, it may absorb and hold water.

- Do not leave the upholstery to heavy, prolonged rain.
- Do not leave standing water on top of the upholstery.
- Keep the upholstery dry and make sure that water doesn't accumulate between the cushions.
- Clean the upholstery with fresh ambient temperature water and brush off any loose dirt.
Use only gentle cleaning products such as natural soap.
- Dry the upholstery completely after cleaning.

7.5 Cleaning your boat's windshield and windows

Keeping your boat's windshield and windows clean is essential for maximizing visibility and ensuring safety.

NOTICE Risk of damage to windshield and windows.

Do not use abrasives, harsh chemicals or scrapers on glass.

Do not use solvents such as acetone, silicone spray, glass cleaning solutions, benzene or harsh detergents on acrylic.

- Clean the tempered glass windshield and windows by using commercially available glass cleaners.
- Dry the windshield and windows with a soft fabric.
- Wash the acrylic windshield and windows from both sides using a mild soap and rinse with cold fresh water.
- Clean the acrylic windshield and windows by rinsing with fresh water to remove dirt and dust.
- To keep the acrylic windshield and windows in good condition, you may use a poly-carbonate protective cleaner.

7.6 Maintaining metal components

Your boat's metal components, both above and below the waterline, require regular maintenance to prevent rust and corrosion caused by the humid atmosphere and saltwater exposure. Routine inspections are essential to detect signs of degradation.

WARNING Risk of death or serious injury.

Corrosion can affect any metal component of the boat if not kept clean and dry when not in use. Deterioration from corrosion can cause component failure, leading to serious injury or death.

Always ensure that all metal components are clean and dry when the boat is not in use.

NOTICE Risk of damage to the metal components.

Never use abrasive cleaners, detergents or soft scrub type cleaners.

Never use abrasive pads, brushes or sponges to attempt to remove stubborn stains.

Never use strong solvents or detergents which contain chlorine, and never use silver cleaners.

- Clean all metal components frequently and keep them dry.
Clean the metal components during the general boat cleaning.
- Pay attention to signs of corrosion.
Treat or replace any corroded components immediately.
- Inspect all underwater metal parts annually for signs of corrosion.
Underwater metal components are subject to electrolysis and galvanic corrosion, which can cause a white, powdery substance to form on metal surfaces, leading to a greenish color or deep pitting on surfaces.
- Replace underwater openings and seacocks every 5 years.

Deterioration caused by corrosion is not covered by Saxdor warranty.

7.7 Maintaining lanyard stop switch

The lanyard stop switch is a vital safety feature on your boat. Regular inspection and maintenance are essential to ensure it functions reliably.

- 
- Inspect the lanyard stop switch monthly to ensure it operates correctly and is free from damage.
 - a) Pull the lanyard while the engine is running.
 - b) If the engine doesn't stop, contact your local Saxdor dealer for lanyard stop switch replacement.

7.8 Maintaining deck floors

Your boat may be equipped with foam flooring with non-slip surface. Keeping flooring in good condition is crucial to maintain its properties.

- 
- Use water, a gentle cleaning product such as soap, and a soft wipe to clean the floors.
 - Do not use harsh detergents like acetone, bleach, oxalic acid or chemicals containing flammable and corrosive agents.
 - Do not use cleaning equipment that may damage the flooring surface such as hard bristle brushes. Pressurized washer may be used for cleaning only when keeping a minimum distance of 50 cm (1.64 feet).
 - Clean the floor regularly and after each heavy use.

Mechanical or any other dents and shoe marks on the deck floors are not covered by the warranty.

7.9 Maintaining fresh and waste water systems

Regular maintenance of your boat's fresh and waste water systems is essential to ensure safe drinking water, prevent buildup and odors, and protect against damage, keeping your boat in optimal condition.

- 
- Cycle the macerator seacock handle open and closed to ensure proper operation of the seacock prior to each use and at regularly scheduled intervals.

If the macerator pump gets stuck, contact your Saxdor dealer for repair.
 - Inspect the hose connections, fittings and electrical wiring of pumps annually.
 - Check the systems for leakage.

If the water pump is equipped with a filter, inspect and clean it annually.
 - Clean the marine toilet with a mild cleaner.

Do not use harsh detergents that can damage the system's plastic or rubber parts.
 - Clean and flush the fresh water and waste systems thoroughly before winter storage.

Make sure all tanks are empty, both systems must be completely drained of water.
 - Read the component manufacturer's instructions and recommendations.

7.10 Maintaining bilge pumps

Maintaining your boat's bilge pumps is important to ensure they function properly in removing water from the bilge. Regular maintenance helps prevent pump failure, which could lead to water accumulation, flooding, or damage to the boat's electrical system, ensuring safety and reliability while on the water.

NOTICE

Risk of damage to bilge pumps.

Debris in bilge pumps can cause pumps to clog.

Check the function of all bilge pumps at regular intervals. Clear the pump inlets from debris.

- Test the operation of bilge pumps periodically by activating the manual switch and observing the water discharge.
- If your bilge pump gets activated frequently or continuously, investigate the source of the leak.
 - a) Check for hull damage, systems leaks, missing drains, and so on.
 - b) If your bilge pump does not discharge, check the bilge pump, hose and hull openings and seacocks for debris.
- Inspect the bilge pumps by removing the basket and remove any debris.
- Keep the bilge clean and dry for winter storage.
- Read the component manufacturer's instructions and recommendations.

7.11 Maintaining fuel system

Maintaining your boat's fuel system is crucial for optimal engine performance, fuel efficiency and reliability. Regular upkeep ensures smooth operation and extends the life of the engine.

- Check the fuel tank compartment floor and fuel system compartments for liquid fuel and gasoline odor before each departure.

If any leak or strong odor occurs, do not turn on the engines or any electrical device.

Open all hatches to ventilate.

- Inspect the fuel system for leaks annually. Check the condition of fuel tank, fuel system components and all hoses.

Any leak, visible crack, deterioration or corrosion indicates that professional inspection or repair is required.
- Check the fuel tank compartment floor for accumulated liquids twice a year.

Remove accumulated liquid by using bilge pump (if equipped) or by wet-dry vacuum cleaner.
- Check the fuel system for presence of water by inspecting the fuel filter content twice a month.

If you notice any water, replace the fuel filter and dry the fuel tank.

8 The details

Check here the relevant number information for your boat.

This information is handy when planning and provisioning for your next trip, and on the way, too.

8.1 Technical specification

Table 8.1 - General specifications

Description	Value
Boat model	Saxdor 270 GTO (T-Top model)
Purpose of the boat	Recreational
Engine options	Mercury V6 225 CMS Mercury V8 300 AMS 2 x Mercury V6 200 CMS
Maximum recommended engine power	294 kW / 400 HP
Maximum speed (v)	45 kn
Recommended fuel for the engine	See the engine manufacturer's manual
Recommended fuel for the heater	See the heater manufacturer's manual
Maximum number of people on board: • Design category C	7
Battery and solar power DC system voltage	12 V
Shore power AC system voltage	110 V or 230 V
Breaking strength of strong points	50 kN

Table 8.2 - Weights

Description	Value	
Light craft condition (m_{LC})	2069 kg	4561 lb
Maximum load on the builder's plate (m_{MBP})	605 kg	1334 lb
Full load	1671 kg	3684 lb
Weight of the maximum recommended number of people (included on the builder's plate) ¹⁾	525 kg	1157 lb
Luggage and other personal belongings (included on the builder's plate)	10 kg	22 lb
Engine (recommended maximum)	272 kg	600 lb

Description	Value	
Fuel	211 kg	465 lb
Fresh water	80 kg	176 lb
Waste water	49 kg	108 lb
Total weight of liquids in fixed tanks when full	129 kg	284 lb
Weight of the boat when towed on a trailer (m_T) ²⁾	3445 kg	7595 lb
Minimum operation condition (m_{MO})	2249 kg	4958 lb
Loaded displacement mass (m_{LDC}) ³⁾	3740 kg	8245 lb

1) Calculated average: one adult equals 75 kg / 165 lb, one child 37.5 kg / 83 lb.

2) Items included in the m_T weight: structure, permanent internal and external equipment, engine, tanks and tank content.

Items not included in the m_T weight: loose internal equipment, loose electronic and navigational equipment (e.g. charts), tools, spare parts, personal safety and life-saving equipment, provisions, bilge water, bait tanks

3) Includes the weight of all persons onboard, all provisions and personal effects, any equipment not included in the light craft mass, cargo (if any) and all consumable liquids (water, fuel, etc.).

Table 8.3 - Tank capacities

Description	Value	
Gasoline (for engines)	300 L	79.3 gal
Diesel (for optional heater)	15 L	4.0 gal
Fresh water	80 L	21.1 gal
Waste water	50 L	13.2 gal

Table 8.4 - Bilge pump capacity

Description	Value	
Automatic	31.5 L/min	8.3 gal/min
Manual (45 strokes/minute)	32.75 L/min	8.65 gal/min

Table 8.5 - Lifting point locations

Dimension	Description	Value	
A	Minimum distance from the measuring point in the end of the keel to the lifting point in the bow	3.80 m	12.47 ft
B	Minimum distance from the measuring point in the end of the keel to the lifting point in the aft	1.07 m	3.51 ft

8.2 Boat dimensions

Figure 8.1 - Saxdor 270 GTO/R dimensions

Table 8.6 - Description of dimensions

Dimension	Description	Value	
D _{WL}	Design waterline	-	
H _A	Air draft: the height from the waterline to the highest non-removable part of the boat (radar/antennas/lights on the T-Top)	2.56 m	8.40 ft
H	Overall height: the height from the bottom of the hull to the highest non-removable part of the boat	3.09 m	10.14 ft
X	The height from the roof to the highest non-removable part of the boat	0.43 m	1.41 ft
L _H	Overall hull length: the overall length of the hull from the bow to the end of the bathing platform	8.45 m	27.72 ft
T _M	Hull draft: the measure from the waterline to the lowest part of the engine (the fin-like skeg that protects the propeller)	0.89 m	2.92 ft
T	Draft: the measure from the waterline to the bottom of the keel	0.45 m	1.48 ft
B _H	Beam: the width of the boat	2.60 m	8.53 ft
L _{MAX}	Maximum length: the length of the boat from the bow to the end of the tilted engine	9.26 m	30.38 ft

Dimension	Description	Value	
L _{MAX1}	Overall length of the boat with the outboard engines	8.74 m	28.67 ft
L _{WL}	Length at waterline: the length of the boat at the waterline	7.73 m	25.36 ft
F _F	Measure from the bow to the waterline	1.02 m	3.35 ft
D _{MAX}	Measure from the highest point of the hull to the bottom of the keel	1.66 m	5.45 ft
F _M	Measure from the cockpit to the waterline	0.98 m	3.22 ft
F _A	Measure from the aft to the waterline	1.33 m	4.36 ft

9 Extras

Check here the relevant info about the warranty and qualification of your boat, as well links to the manufacturer's information about the different equipment on your boat.

9.1 Declaration of conformity

The declaration of conformity states that your boat meets all relevant requirements of all product safety directives applicable to the boat.

- You can find the declaration of conformity document in the Saxdor documentation bag.

9.2 Electrical wiring diagram

The electrical wiring diagram includes the drawings of all circuits and electrical connections on your boat.

- If you need a copy of the electrical wiring diagram, please contact your Saxdor dealer.

9.3 Warranty

The warranty states the guarantee of the integrity of your boat and the maker's responsibility of your boat.

- Check the warranty at www.saxdoryachts.com.

9.4 Warnings and cautions

Heed all the warnings and cautions in this manual! For your convenience, they are also listed here.

⚠ DANGER

Not heeding the limitations stated on the builder's plate can cause boat capsizing, swamping or sinking.

Do not exceed the maximum permitted engine power or number of persons on board.

Respect the conditions set out by the design category of your boat.

⚠ DANGER

Risk of death, serious injury or severe damage to your boat.

Sudden grounding from high speeds can cause serious injury or death and severe damage to your boat.

Rapid deceleration can cause occupants to crash the boat and to be ejected from the boat.

Be aware of your boat's minimal safe depth to avoid grounding.

⚠ DANGER

Risk of electric shock, fire or explosion.

Remember that water and electricity are a bad combination.

Let only a competent marine electrical technician carry out any installation, alteration or maintenance work to the electrical system.

⚠ DANGER

Risk of death, electric shock or injury.

Connect the shore power cable first to your boat and only then to the power supply onshore.

If you connect the cable in the wrong order and the live power cable comes into contact with water, people on board, nearby swimmers and marine life will be exposed to a potentially lethal electric shock.

⚠ DANGER

Risk of death, electric shock, injury or fire.

Do not alter shore power cable connectors. Use only cable connectors that are compatible with the shore power inlet on your boat and shore power receptacles.

Disconnect the shore power connection when the system is not in use.

⚠ WARNING

Risk of collision.

Do not operate the boat outside of inland waterways in foggy conditions, in poor visibility or at night.

⚠ WARNING

Neglecting the necessary safety precautions can risk lives.

Take safety seriously. Remember that you as the driver are responsible for the safety for others.

⚠ WARNING

Risk of drowning.

Neglecting to carry onboard and use life jackets in emergency can cause death and serious injury.

Make sure that your boat is equipped with proper number and type of life jackets.

Make sure that all persons on board, including yourself, are wearing a life jacket at all times.

⚠ WARNING

Risk of fire or explosion.

When replacing parts of the fire-fighting installation only matching components shall be used, bearing the same designation or being equivalent in their technical and fire resistant capabilities.

⚠ WARNING

Not respecting the design category limitations of your boat can put you and your passengers at risk.

Do not exceed the maximum permitted engine power or number of persons on board.

Ensure that the anticipated wind and sea conditions correspond to the design category of your boat.

Always make sure your boat and your operating skills match the weather and water conditions where you are going to operate.

⚠ WARNING

Any change in the weight distribution may significantly affect the stability, trim and performance of the boat.

When loading the boat, never exceed the maximum recommended load. Always load the boat carefully and distribute loads appropriately to maintain design trim (approximately level). Avoid placing heavy weights high up.

Take into account any modifications that may affect weight distribution, such as a different engine or a fishing tower.

⚠ WARNING

Getting entrapped in the cabin and not having quick access to safety equipment can be fatal in case of flooding.

Never lock or block the access to the emergency exits or safety equipment.

Do not store luggage or other heavy items on top of the front deck hatch.

⚠ WARNING

Getting water into the hatches or inside the boat increases the risk of flooding.

Always keep hatches closed when under way.

⚠ WARNING

Risk of serious injury or death.

Any leak, especially a serious one, can cause the boat to sink quickly.

Wear a life jacket at all times and evacuate immediately from a sinking boat.

⚠ WARNING

Risk of flooding.

Getting water inside the boat increases the risk of flooding.

Keep seacocks closed when not needed for operation to minimize the risk of flooding (for example water inlet of toilet flushing line).

⚠ WARNING

Risk of fire or explosion.

Handle open flame and fuel-driven devices with caution.

⚠ WARNING

Careless refueling is a fire hazard.

Never fill the fuel tank or handle fuel when the engine is running.

Don't smoke when handling fuel.

⚠ WARNING

Trying to cope by yourself too long can quickly escalate an emergency.
In case you cannot handle the situation, always contact rescue service without delay!

⚠ WARNING

Risk of drowning! The boat can sink or capsize if too much water gets into the boat.
Do not rely solely on the bilge pump system. It is not designed to pump out large amounts of water.

⚠ WARNING

Risk of injury.
Do not use the outboard engine's cavitation plates for reboarding.

⚠ WARNING

Risk of explosion.
Never use water to put out fuel fire. If the fire gets in touch with a flammable fuel, water can spread the fire and cause an explosion.

⚠ WARNING

Carbon monoxide (CO) is harmful to your health in higher concentrations, and can even be lethal. Even low concentrations of CO can cause damage with prolonged exposure.

Prevent the accumulation of CO in the first place by minimizing the risk situations.
Act quickly if the CO alarm turns on or if you suspect CO poisoning.

⚠ WARNING

Poor trimming can risk lives! Adjusting the trim angle at high speeds may radically affect your boat's behavior. A high running trim can obstruct the view so you may not notice swimmers and small vessels.

Avoid making adjustments at high speeds.

Don't drive with the bow high for long periods of time. Trim the boat's vertical angle to lower the attitude in congested areas.

⚠ WARNING

Overcorrecting, dropping the speed suddenly or hitting the waves at a wrong angle when driving at high speeds can have serious consequences.

Do not exceed your boating capabilities. Drive at speeds you are comfortable with.
Avoid sudden maneuvers.

Always use the lanyard stop switch.

⚠ WARNING

Risk of death, electric shock or injury.

Working on the electrical installation while the system is energized can cause an electric shock.

Never work on the electrical installation while the system is energized.

⚠ WARNING

Risk of electric shock or damage to the equipment.

Never alter or modify the rated current amperage of overcurrent protective devices.

⚠ WARNING Risk of electric shock, battery overheating, explosion, fire or harmful gases.
Do not block the battery ventilation.

⚠ WARNING Risk of electric shock, battery overheating, explosion, fire or harmful gases.
Do not use external charger on the boat.

⚠ WARNING Hot engine parts could cause a fire if in contact with flammable materials.
Store equipment that contains gasoline only in compartments designed for this purpose.

⚠ WARNING The boat can sink if too much water gets into the boat.
If you suspect a leak, find out the reason and go ashore as soon as possible. The bilge pump system is not designed to pump out large amounts of water.
If there is a rapid increase in water accumulation, call rescue service.

⚠ WARNING Risk of fire or carbon monoxide accumulation.
Do not block the heater's exhaust pipe, ventilation or warm air outlet.

⚠ WARNING Risk of fire or overheating.
Do not close the lid of the wet bar when the cooktop is hot.

⚠ WARNING Risk of death or serious injury.
Failure to lock the seat can cause you to be ejected from the seat.
Lock the cockpit seat when you drive.

⚠ WARNING Risk of serious injury or material damage.
The water ski pole and its mounting may tear off and cause damage and injury.
Use the pole only for water skiing. Do not use it for towing other boats, vessels or water toys.

⚠ WARNING A rotating propeller may cause death or a serious injury.
Shut off the engine when there are people in the water near the boat.
Do not reboard the boat when the engine is running.
Do not use the engine's cavitation plates for reboarding the boat.

⚠ WARNING Risk of death or serious injury.

Corrosion can affect any metal component of the boat if not kept clean and dry when not in use. Deterioration from corrosion can cause component failure, leading to serious injury or death.

Always ensure that all metal components are clean and dry when the boat is not in use.

⚠ CAUTION Risk of injury or material damage.

The owner is responsible for ensuring that the normal mode of operation is maintained. This means that the speed of the craft needs to be matched to the prevailing sea state, the craft being used with good seamanship behavior.

⚠ CAUTION The boat may tip or the lifting straps may slide during lifting if the straps are not attached properly or if the loads move and disturb the balance of the boat.

Empty the bilge and waste water tanks and remove any unnecessary load from the boat.

Do not hook the boat through the aft wings as the straps may slide away.

⚠ CAUTION Trailering a large load can be a traffic hazard.

Use a trailer that is suitable for the boat.

Do not exceed the trailer capacity.

Secure the boat and the trailer properly.

⚠ CAUTION Risk of electric shock.

Do not touch the batteries or electric connections.

⚠ CAUTION Risk of electric shock or damage to the equipment.

Before you reset the fuse, find out why it has tripped.

⚠ CAUTION Risk of fire, explosion or material damage.

Avoid damaging the fuel lines on your boat. Pay attention to the location and condition of the fuel lines.

⚠ CAUTION Pollution and health hazard.

Emptying waste water tanks into the water can cause water eutrophication and visual pollution in coastal areas.

Do not empty the waste tanks into the waters where it is not allowed by the law.

Plan your voyage in a way that you can always reach shore with proper fixed waste water tanks in good time before your waste water tanks get filled.

⚠ CAUTION

Risk of injury or material damage.

Do not drive the boat when the sun shade is up. The sun shade and mounting poles may tear off.

Do not use the sun shade in harsh weather conditions and in strong wind.

⚠ CAUTION

Risk of injury or material damage.

Do not attach the water ski rope to cleats or other parts of the boat.

⚠ CAUTION

Risk of injury or material damage.

Do not block access to the bathing ladder.

Do not drive the boat when the bathing ladder is down.

⚠ CAUTION

Risk of injury or material damage.

Do not use the harbor covers when driving. The covers may tear off in strong wind.

⚠ CAUTION

Risk of injury or material damage.

Chemicals and harmful gases may be dangerous to people or may cause material damage to your boat.

When using chemicals, read the manufacturer's instructions regarding safety and maintenance.

Wear protective equipment and work in a well-ventilated space.

⚠ CAUTION

Risk of injury or material damage.

Chemicals and harmful gases may be dangerous to people or may cause material damage to your boat.

Wear protective equipment when applying antifouling paint. If your paint contains solvents, work in well-ventilated space.

Make sure to read all the labels, data sheet and manufacturer's instructions and recommendations before starting to apply antifouling paint.

Saxdor Yachts cannot be held responsible for modifications not approved by the company.

Always use trained and competent people for maintenance, repair or modifications.

Modifications that may affect the safety characteristics of the boat need to be assessed, executed and documented by competent people.

9.5 Glossary

Check here the terms and abbreviations used in the manual.

Table 9.1 - Terms and abbreviations

Term, abbreviation, acronym	Definition
ABYC	American Boat and Yacht Council
Aft, AFT	The rear of the boat
Aftdeck	Deck area in the rear part of the boat, social area
AIS	An automatic identification system (AIS) transponder which automatically provides position, identification and other information about the boat to other ships and to coastal authorities
	Aquatic Invasive Species. Plants, animals or microbes that have been classified as harmful by the ABYC if they spread from a body of water to another body of water.
ANSI	American National Standards Institute, the main organization supporting the development of technology standards in the United States
Auxiliary, Aux	Backup or supplementary equipment, such as auxiliary battery
Beaufort scale, BFT	The measure that relates wind speed to observed conditions at sea or on land
Bilge	Lowest point of the boat's inner hull
Black water	The waste water collected from the toilet.
Bow	The front end of the boat
COLREG	International regulations for preventing collisions at sea
Foredeck	Deck area at the bow of the boat
GPS	Global positioning system
Grey water	The waste water collected from the sinks in the toilet compartment and wet bar, and from the condensate water of the air conditioning unit.
Helm station	Steering station comprising the steering and navigation equipment and the driver's seat
Hull	Boat's frame
ISO	International Standards Organization, the international standard development organization
kN	Kilonewton, unit of force
kn	Knot, a unit of speed equal to one nautical mile per hour (1 kn = 1.852 km/h or 1.151 mph)
kW	Kilowatt, unit of engine power (1 kW = 1.34 hp)

Term, abbreviation, acronym	Definition
MARPOL	International Convention for the Prevention of Pollution from Ships
NMEA	National Marine Electronics Association, a combined electrical and data specification for communication between marine electronics such as echo sounder, sonars, autopilot, GPS receivers and many other types of instruments
Port	Left side of the boat when facing the bow
Starboard, STB	Right side of the boat when facing the bow
Saxdor documentation bag	A satchel including the manufacturer's manuals for the different equipment on the boat
Transom	Vertical section at the stern of the boat
Trim	The relationship of the boat's bow and stern angle to the water. Also known as attitude.
VHF	Very High Frequency radio communication system

9.6 Customer satisfaction survey

Please answer the following questions (5 = very satisfied, 1 = not satisfied at all):

	5	4	3	2	1
How satisfied are you with your new boat overall?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
How satisfied are you with your new engine overall?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
How satisfied are you with your dealer overall?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
